

### ***Listing of the Claims***

This listing of claims will replace all prior versions, and listings of claims in the application.

1 - 9. (Canceled)

10. (Currently amended)      A method for the quantification of one or more target nucleic acid molecules in a sample comprising hybridizing one or more detectably labeled oligonucleotides with said one or more target nucleic acid molecules, and quantifying the amount of said one or more target nucleic acid molecules;

wherein said one or more oligonucleotides are labeled with only a single type of detectable label, said single type of detectable label having the same chemical structure, and said oligonucleotide undergoes a detectable change in an observable property upon said hybridizing.

11. (Currently amended)      A method for the quantitation or detection of one or more target nucleic acid molecules in a sample during nucleic acid synthesis comprising:

mixing one or more a target nucleic acid molecules with one or more detectably labeled oligonucleotides, wherein said one or more oligonucleotides are labeled with only a single type of detectable label, said single type of detectable label having the same chemical structure, and said oligonucleotide undergoes a detectable change in an observable property

upon hybridization of said one or more oligonucleotides to said one or more target nucleic acid molecules;

incubating said mixture under conditions sufficient to synthesize one or more nucleic acid molecules complementary to all or a portion of said one or more target nucleic acid molecules, said one or more synthesized nucleic acid molecules comprising said one or more oligonucleotides; and

detecting the presence or absence or quantifying the amount of said one or more synthesized nucleic acid molecules by measuring said detectable label.

12. (Currently amended) A method for quantitation or detection of one or more target nucleic acid molecules in a sample during nucleic acid amplification comprising:

mixing one or more target nucleic acid molecules with one or more detectably labeled oligonucleotides under conditions sufficient to amplify one or more nucleic acid molecules complementary to all or a portion of said one or more target nucleic acid molecules, said one or more amplified nucleic acid molecules comprising said one or more oligonucleotides, wherein said one or more oligonucleotides are labeled with only a single type of detectable label, said single type of detectable label having the same chemical structure, and said oligonucleotide undergoes a detectable change in an observable property upon hybridization of said one or more oligonucleotides to said one or more target nucleic acid molecules; and

detecting the presence or absence or quantifying the amount of said one or more target nucleic acid molecules by measuring said detectable label.

13. (Previously presented) The method of claim 10, 11 or 12, wherein said label is selected from the group consisting of fluorescent labels, chemiluminescent labels and bioluminescent labels.

14. (Original) The method of claims 11 or 12, wherein said detection step comprises detecting or measuring the level of activity of the detectable label during said synthesis or amplification compared to the level of activity of the detectable label in the absence of said synthesis or amplification.

15. (Original) The method of claim 12, wherein said amplification is accomplished by at least one method selected from the group consisting of PCR, 5-RACE, RT PCR, Allele-specific PCR, Anchor PCR, "one-sided PCR," LCR, NASBA, and SDA.

16. (Canceled)

17. (Original) The method of anyone of claims 10, 11 or 12, wherein said one or more oligonucleotides comprise one or more hairpin structures.

18. (Currently amended) A method for amplifying a double stranded nucleic acid molecule, comprising:

providing a first and second primer, wherein said first primer is complementary to a sequence within or at or near the 3'-termini of the first strand of said nucleic acid molecule and said second primer is complementary to a sequence within or at or near the 3'-termini of the second strand of said nucleic acid molecule;

hybridizing said first primer to said first strand and said second primer to said second strand in the presence of one or more polymerases, under conditions such that a third nucleic acid molecule complementary to all or a portion of said first strand and a fourth nucleic acid molecule complementary to all or a portion said second strand are synthesized;

denaturing said first and third strands, and said second and fourth strands; and repeating the above steps one or more times, wherein said one or more primers are labeled with only a single type of detectable label, said single type of detectable label having the same chemical structure;

wherein said primer undergoes a detectable change in an observable property upon hybridization of said one or more labeled primers to said nucleic acid molecule.

19. (Original) The method of claim 18, wherein at least one of said primers comprises at least one hairpin structure.

20. (Currently amended) A method for the quantification or detection of nucleic acid molecules comprising:

mixing one or more labeled oligonucleotides with one or more target nucleic acid molecules to be detected or quantitated, wherein said one or more oligonucleotides are

labeled with only a single type of fluorescent label, said single type of label having the same chemical structure, wherein said oligonucleotide undergoes a detectable change in an observable property upon hybridization of said one or more oligonucleotides to said one or more target nucleic acid molecules; and

detecting or measuring an increase in fluorescence associated with said one or more oligonucleotides hybridizing to said one or more target nucleic acid molecules.

21. (Currently amended) The method of claim 20, wherein the fluorescent label is FAM 5-carboxyfluorescein (FAM).

22. (Currently amended) The method of claim 20, wherein the fluorescent label is TAMRA N,N,N',N'-tetramethyl-6-carboxyrhodamine (TAMRA).

23 - 46. (Canceled)

47. (Currently amended) A method for detecting a target nucleic acid sequence, comprising:

contacting a sample containing a mixture of nucleic acid molecules with one or more oligonucleotides which are labeled with only a single type of detectable label, said single type of detectable label having the same chemical structure, and are capable of hybridizing to a target nucleic acid molecule, wherein said ~~detectable~~ oligonucleotide undergoes a change in one or more observable properties upon said hybridizing; and

observing the observable property, wherein a change in the observable property indicates the presence of the target nucleic acid sequence.

48 - 58. (Canceled)

59. (Previously presented) The method of claim 18, wherein said primers further comprise one or more hairpin structures.

60 - 62. (Canceled)

63. (Previously presented) The method of any one of claims 10, 11, 12, 18, 20 or 47, wherein said detectable label is at the fourth base from the 3' termini.

64. (Previously presented) The method of any one of claims 10, 11, 12, 18, 20 or 47, wherein said detectable label is at the fifth base from the 3' termini.

65. (Previously presented) The method of any one of claims 10, 11, 12, 18, 20 or 47, wherein said detectable label is at the sixth base from the 3' termini.

66. (Previously presented) The method of any one of claims 10, 11, 12, 18, 20 or 47, wherein said detectable label is attached to one of the ten 3'-most terminal nucleotides.

67. (Previously presented) The method of any one of claims 10, 11, 12, 18, 20 or 47, wherein said detectable label is attached to one of the twenty 3'-most terminal nucleotides.

68 - 75. (Canceled)

76. (Previously presented) The method of claim 20, wherein said fluorescent label is 2'7'-dimethoxy-4'5'-dichloro-6-carboxyfluorescein (JOE) or FAM.

77. (Previously presented) The method of claim 20, wherein said fluorescent label is 6-carboxy-X-rhodamine (ROX).

78. (Previously presented) The method of claim 13, wherein said fluorescent label is JOE or FAM.

79. (Previously presented) The method of claim 13, wherein said fluorescent label is ROX.

80. (Previously presented) The method of claim 18, wherein said label is selected from the group consisting of fluorescent labels, chemiluminescent labels and bioluminescent labels.

81. (Previously presented) The method of claim 80, wherein said fluorescent label is JOE or FAM.

82. (Previously presented) The method of claim 80, wherein said fluorescent label is ROX.

83. (Previously presented) The method of claim 47, wherein said label is selected from the group consisting of fluorescent labels, chemiluminescent labels and bioluminescent labels.

84. (Previously presented) The method of claim 83, wherein said fluorescent label is JOE or FAM.

85. (Previously presented) The method of claim 83, wherein said fluorescent label is ROX.
